You can't form the square that inscribes the circle with square approximate π *using any point that don't cross the tangent of square approximate* π, *isn't off the angular line from the center to a circle and square approximate* π *intersection, and isn't off the* 1 *unit square side/tangent of circle perpendicular to the tangent of square approximate* π

Three points arise from approximate π, *only one point arise from the quotient of* $\frac{4\sqrt{\sqrt{D^2} \div \sqrt{\Phi^2}}}{D\ as\ Unit}$

You cannot use two circles and hide one and claim only one circle's diameter is being used

If $r = 2$, *circumference and area of that circle is numerically equal*

If $L, W, H = 1$ *for formulas below...*

$C = \pi 2r = 4\sqrt{\Phi^{-1}} \quad r = D/2$

$D = 2r \quad \pi = C : D$

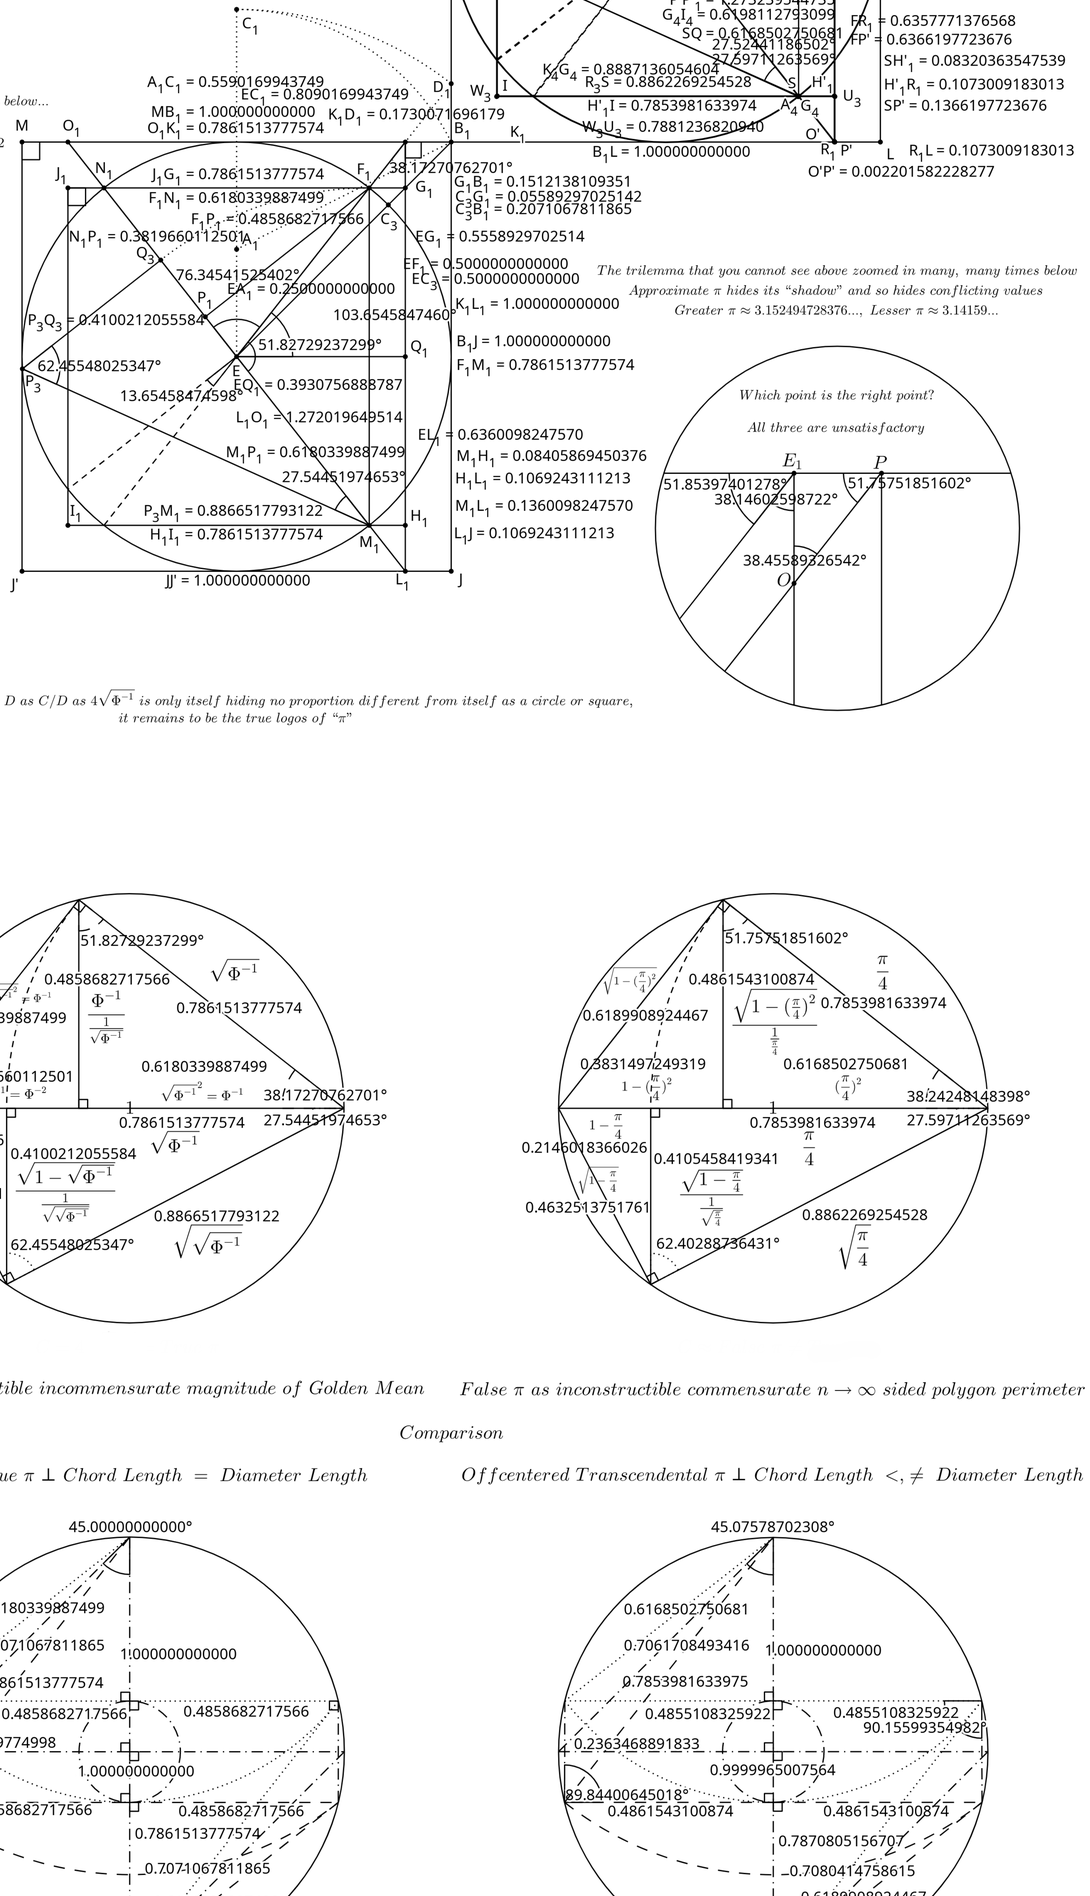
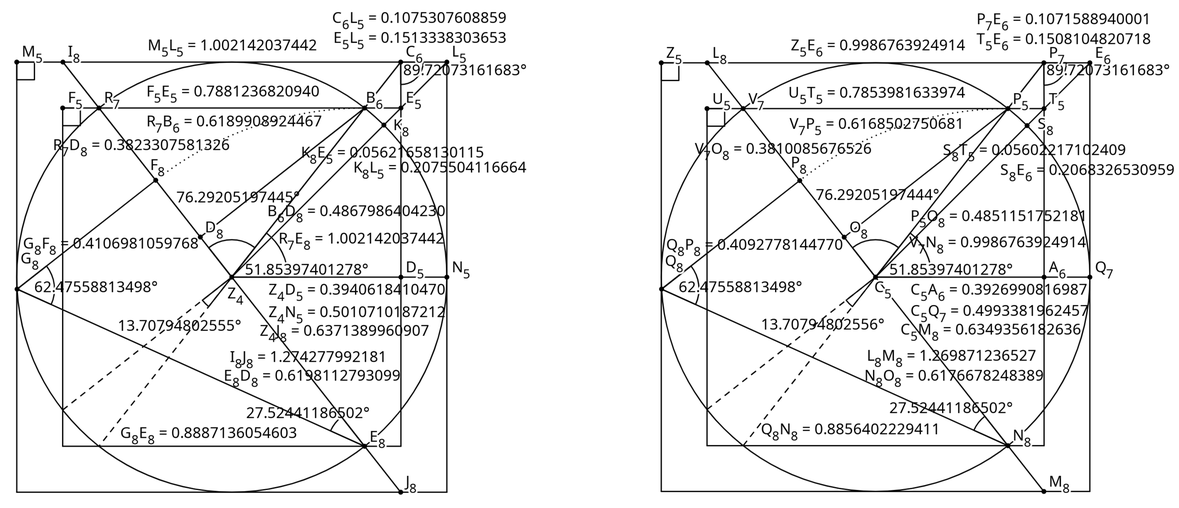
$V_{Co} = 1/3\sqrt{\Phi}$

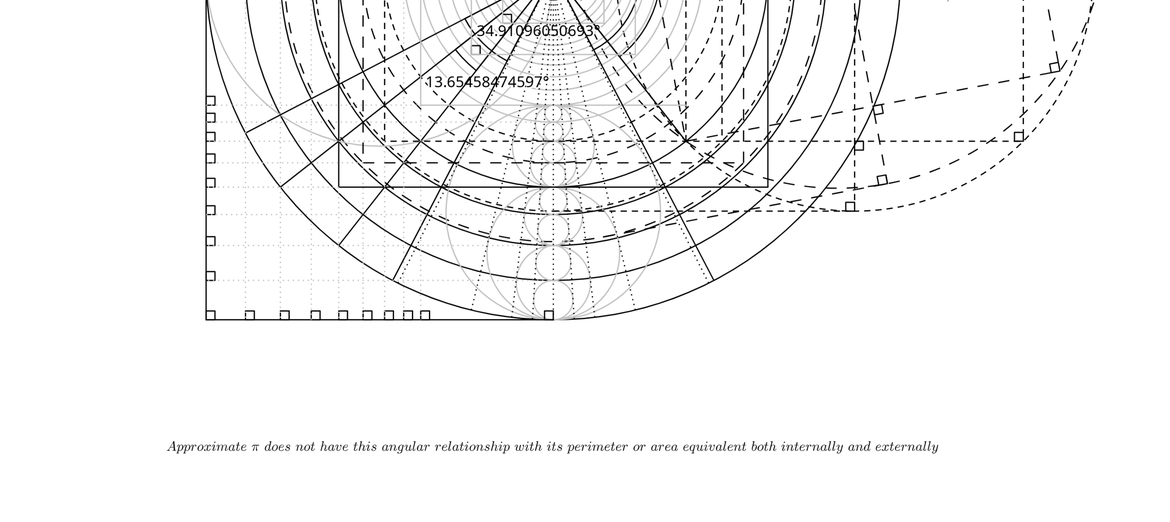


The trilemma that you cannot see above zoomed in many, many times below
Approximate π *hides its "shadow" and so hides conflicting values*
Greater $\pi \approx 3.152494728376...$, *Lesser* $\pi \approx 3.14159...$

Since the measure of $C : D$ *as* C/D *as* $4\sqrt{\Phi^{-1}}$ *is only itself hiding no proportion different from itself as a circle or square, it remains to be the true logos of "*π*"*

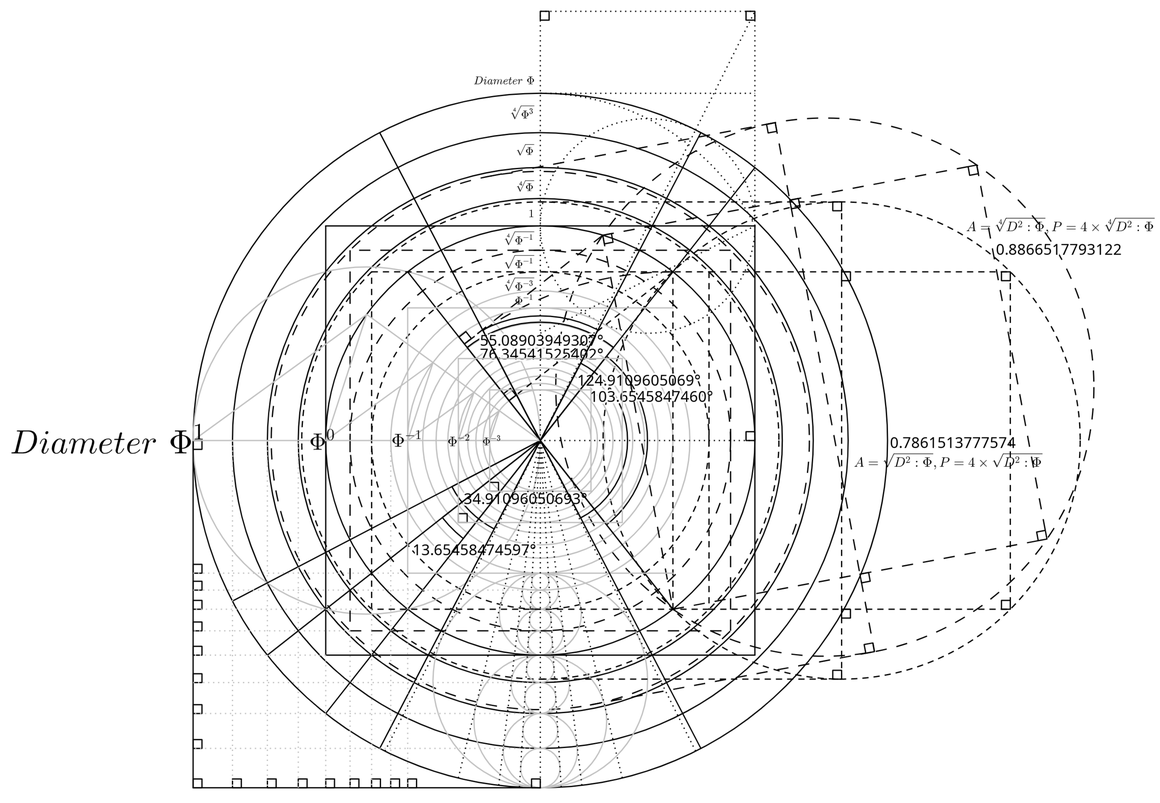


Here lies four examples using greater and lesser approximate π *based square perimeter and angle values, none resolves the trilemma*
None of the points on the 1 *unit square are perpendicular to the tangent of the approximate perimeter square* π *value*
Neither the greater nor the lesser approximate π*'s square and angle in relation to the circle has any unique property in relation to the* 1 *unit square*
Only the $4\sqrt{\Phi^{-1}}$ *square resolves the trilemma honestly without using any hidden square*



The true π*'s area square's perimeter and area with the true* π*'s perimeter square's perimeter and area has a unified angular relationship to the Diameter, Circle, and* 1 *unit square*

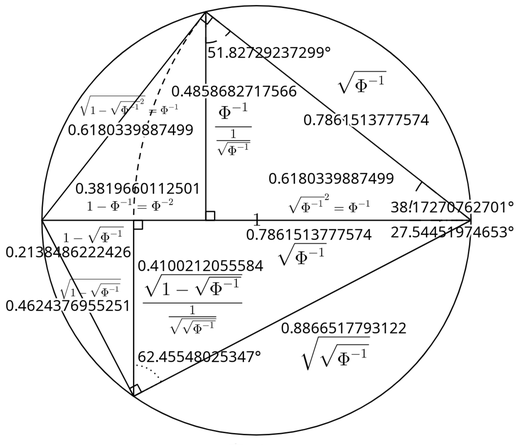
Clearer visual proof of perpendicular tangents and consistent proportional symmetry for true π



Approximate π *does not have this angular relationship with its perimeter or area equivalent both internally and externally*

Using the proper angles, new circles and squares can be constructed both inwards and outwards all in perfect constant proportional harmony at any magnitude

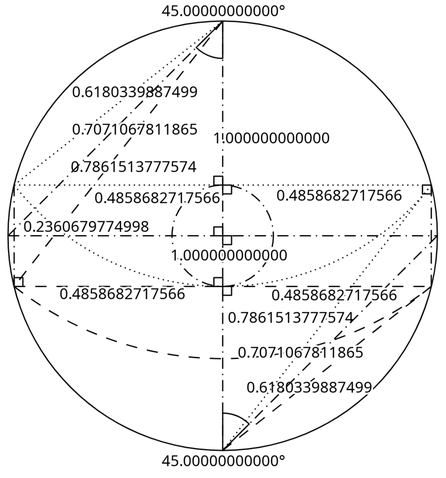
True π *as constructible incommensurate magnitude of Golden Mean*



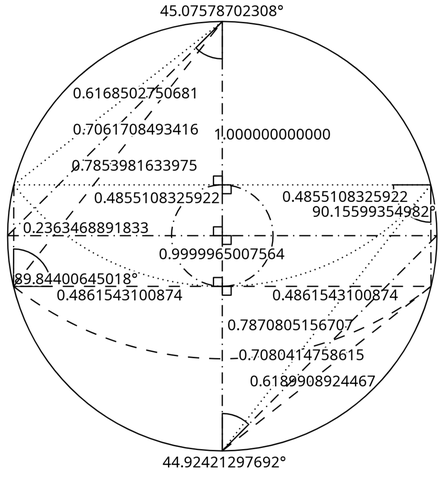
False π *as inconstructible commensurate* $n \to \infty$ *sided polygon perimeter*

Comparison

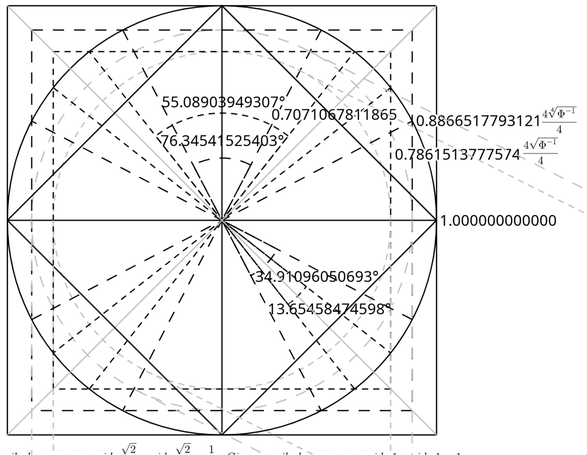
Centered True $\pi \perp$ *Chord Length* $=$ *Diameter Length*



Offcentered Transcendental $\pi \perp$ *Chord Length* $<, \neq$ *Diameter Length*



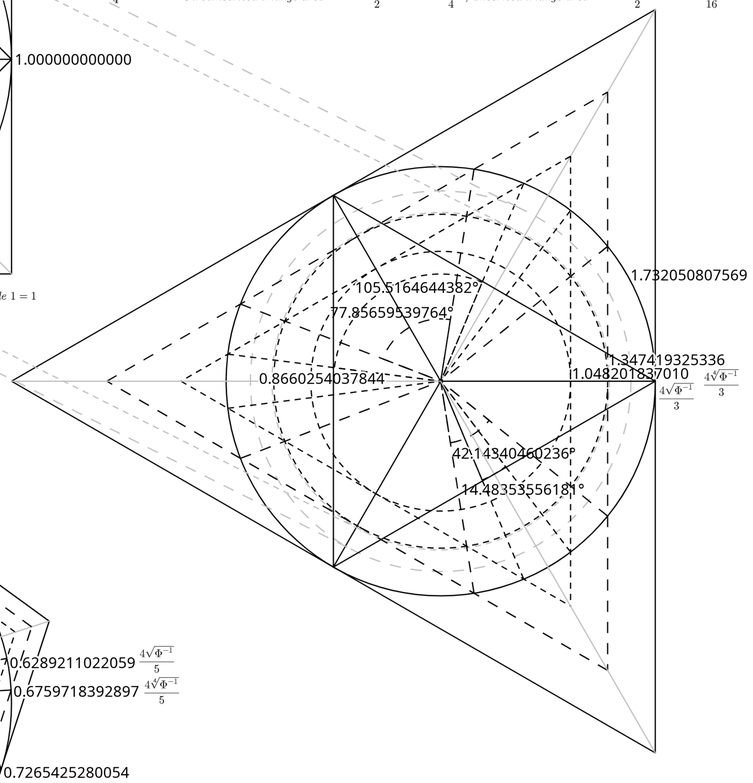
Given an equilateral $n \to \infty$ sided polygon with the same area as the circle, it approximately approaches towards the measure of the circumference of a circle with the same area as the polygon
Circumscribed 1 unit square meets 1 unit diameter circle at four intersections, the square and circle has internally 360° unity with each other, there's one circumscribed polygon with 1 unit perpendicular midline with 1 unit side
Inscribed square area : circumscribed square area = inscribed square area, inscribed square side : circumscribed square side = inscribed square side, no inscribed polygon with 1 unit diagonal with 1 unit side
Using the circumference measure of true π, any sided polygon can be made with the same perimeter to the 1 unit diameter circle's area square perimeter or perimeter square perimeter
However, the area takes precedent over the perimeter or circumference of the polygon or circle as the common unity of the constant of two different ratios of magnitude sharing the same area

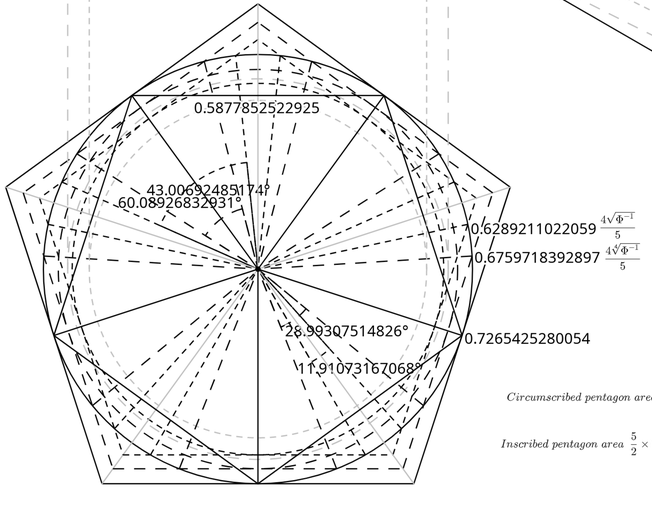


Inscribed square area side $\frac{\sqrt{2}}{2} \times side\ \frac{\sqrt{2}}{2} = \frac{1}{2}$, Circumscribed square area side $1 \times side\ 1 = 1$

$1\ unit\ diameter\ circle\ area = \sqrt{\Phi^{-1}}$

Circumscribed triange area $\frac{base\sqrt{3} \times height\ \frac{3}{2}}{2} = \frac{3\sqrt{3}}{4}$, Inscribed triange area $\frac{base\ \frac{\sqrt{3}}{2} \times height\ \frac{3}{4}}{2} = \frac{3\sqrt{3}}{16}$

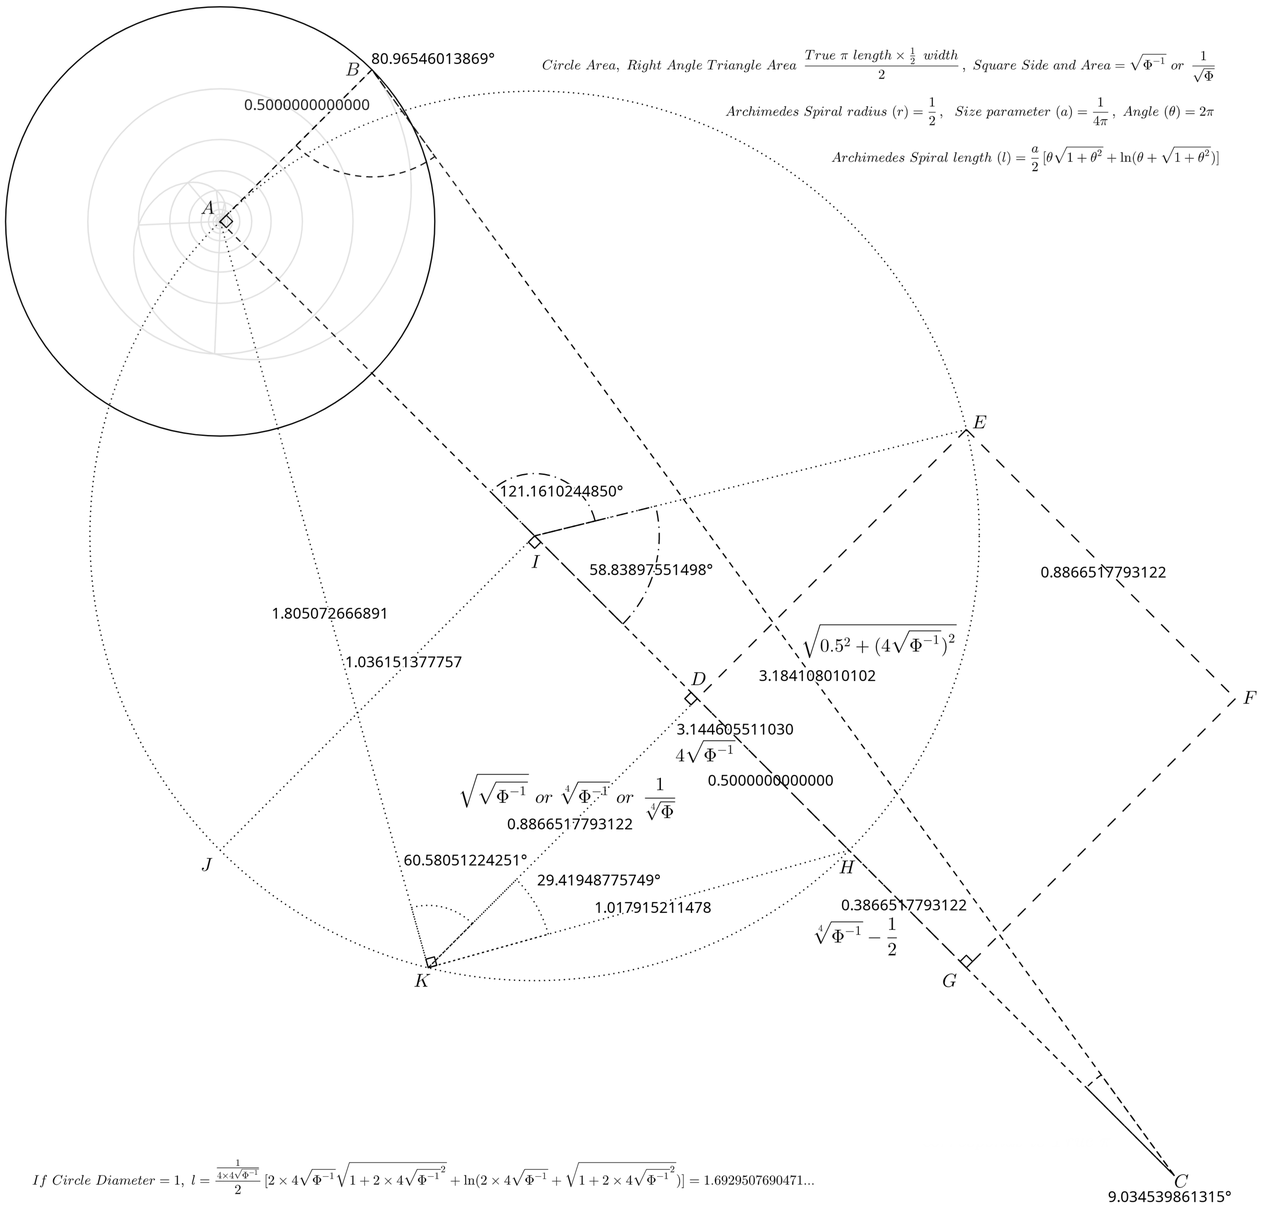




Circumscribed pentagon area $\frac{5}{2} \times base\sqrt[4]{5}\Phi^{-3/2} \times Apothem\ \frac{1}{2} = \frac{\sqrt[4]{5} \times 5\Phi^{-3/2}}{4}$

Inscribed pentagon area $\frac{5}{2} \times base\ \frac{\sqrt{2(5-\sqrt{5})}}{4} \times Apothem\ \frac{\Phi}{4} = \frac{5}{32}\sqrt{2(5+\sqrt{5})}$

Circumscribed triangle to 1 unit diameter circle has sides longer than 1, circumscribed pentagon to 1 unit diameter circle has sides shorter than 1
Any inscribed polygon side is shorter than diameter of 1 unit diameter circle, all inscribed polygons have no direct proportion to the 1 unit diameter circle
Only the circle's area square's perimeter side or the circle's perimeter square's perimeter side is also the value of its area



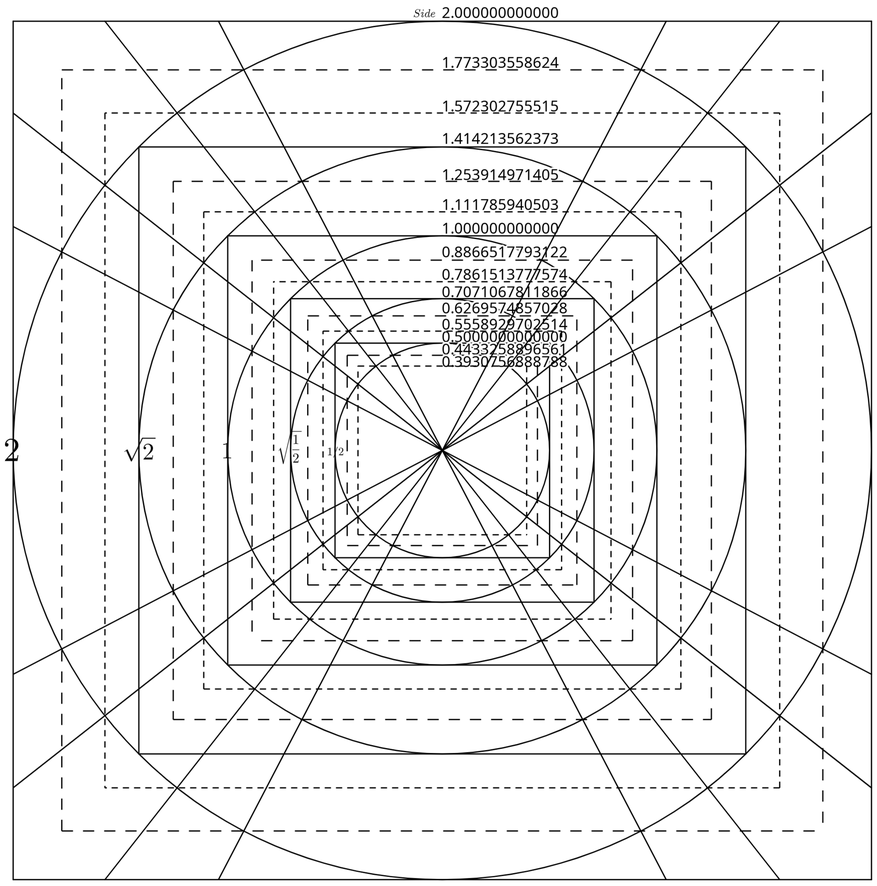
If Circle Diameter = 1, $l = \frac{1}{\frac{4\times4\sqrt{\Phi^{-1}}}{2}}[2 \times 4\sqrt{\Phi^{-1}}\sqrt{1 + 2 \times 4\sqrt{\Phi^{-1}}^2} + \ln(2 \times 4\sqrt{\Phi^{-1}} + \sqrt{1 + 2 \times 4\sqrt{\Phi^{-1}}^2})] = 1.6929507690471...$

One Revolution from center of circle with subtangent of $4\sqrt{\Phi^{-1}}$ corresponds to true π, fools presumes false π arc length to synchronize the tangent of Conon of Samos's Polar Equation

Quadratrix Curve using True π measure as $4\sqrt{\Phi^{-1}}$ does not negate Φ proportionality

It is not rigorous enough if it works on any substitute measure

After the angular perimeter and area of true π is arrived at, only then can any circle can be drawn using the same circumcenter



in relation to those angles and its intersections on the new circle to make the perimeter or area proportioned square of that new circle

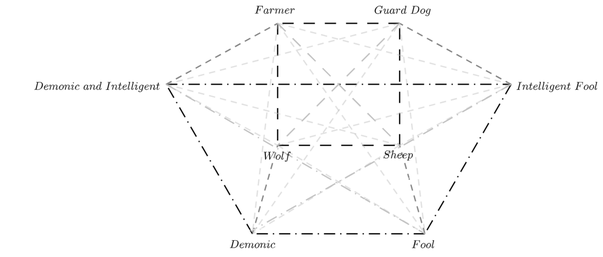
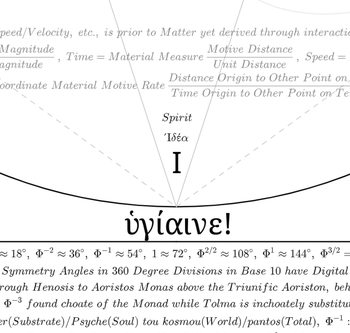
Wise and Intelligent

Wise Fool



General Life Lessons
Wisdom
Know thine Love within Wisdom of the Divine Self above all else
Seek out noble personalities with noble intellects
Work smarter not harder towards self sufficiency
Discernment
Compared to what? At what cost? What hard evidence do you have?
Learn about truisms, heuristics, fallacies
Situational Awareness
Be aware of your surroundings using discernment
Trust nobody
Never take any falsehoods and ad hominems from anyone seriously
Never be around those bound to fetters that you don't want to emulate
Redundancy
Have more than one thing of importance in more than one location
One archive is a backed up backup of the original
Four Types of Redundancies : Body, Mind, Social, Monetary
Of the Body : Clean Air/Water/Food/Clothes/Shelter/People/Pets, Hygiene maintenance products, Trauma Kit, Medicine, e.g., HOM3OSTASIS Protocol 1 gram Nicotinic Acid to 1.2 gram L − Glutamine
Of the Mind : Analog and Digital Data of Memories, Knowledge, Wisdom, e.g., Digital Files in Portable SSD, Physical Copies of Philosophy Books, Personal Diary
Of the Social : Family, Relatives, Friends, Communities, Allegiances
Of the Monetary : Tools, Weapons, Ammo, Land, Fuel, Vehicles, Minerals, Crops, Livestock, Networking, Currency, Stocks, Time, Services, Collectables, Miscellaneous Consumables
Diversification
Diversify life skills
Preplan to prepare for all tragedies and eventualities
Diversify Redundancies
Seek Not Excess
Don't promote trash for anyone
Don't perpetuate personality cult
Don't abuse intelligence, charisma, beauty, strength
Don't go along to get along in being all things to all people by pandering to ignoble personalities and/or ignoble intellects



Seek Not Excess
