Symbols of geometric objects are not geometric objects

A line can finitely extend or dimish indefinitely

A circle takes shape when a line is formed such that the distance from any point on the line to a specific center point remains a straight line, referred to as the radius. This consistency persists regardless of the point chosen. Furthermore, if the line is extended by its own length, it converges with the circle once more.

You can't form the square that inscribes the circle with square approximate π using any point that don't cross the tangent of square approximate π, isn't off the angular line from the center to a circle and square approximate π intersection, and isn't off the 1 unit square side/tangent of circle perpendicular to the tangent of square approximate π

Three points arise from approximate π, only one point arise from the quotient of $\frac{4\sqrt{\sqrt{D^2} \div \sqrt{\Phi^2}}}{D \text{ as } Unit}$

You cannot use two circles and hide one and claim only one circle's diameter is being used

If $r = 2$, π and circumarea of that same circle with $r = 2$ is numerically equal in measure

If $L, W, H = 1$ for formulas below...

$C = \pi 2r = 4\sqrt{\Phi^{-1}}$ $\quad r = \frac{D}{2}$

$D = 2r$ $\quad \pi = C : D,\ C : r$

$A_C = \pi r^2 = (\sqrt{\frac{C}{4}})^2 = \sqrt{\Phi^{-1}}$

$SA_S = 4\pi r^2 = 4\sqrt{\Phi^{-1}}$

$V_S = \frac{2}{3\sqrt{\Phi}}$

$CSA_{Cy} = 4\sqrt{\Phi^{-1}}$

$TSA_{Cy} = 6\sqrt{\Phi^{-1}}$

$V_{Cy} = \sqrt{\Phi^{-1}}$ $\quad l_{Co} = \frac{\sqrt{5}}{2}$

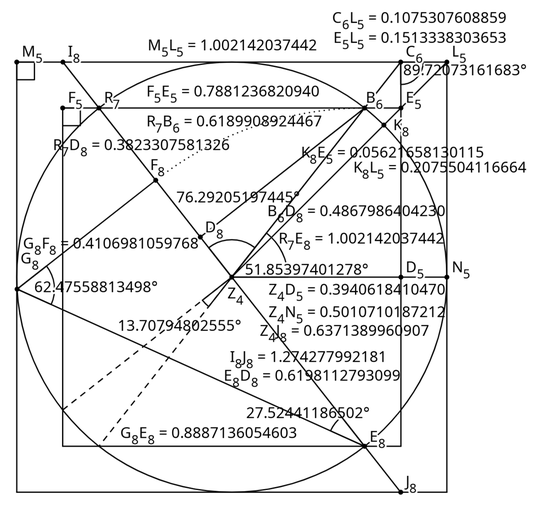

$LSA_{Co} = 5 - \sqrt{5}$

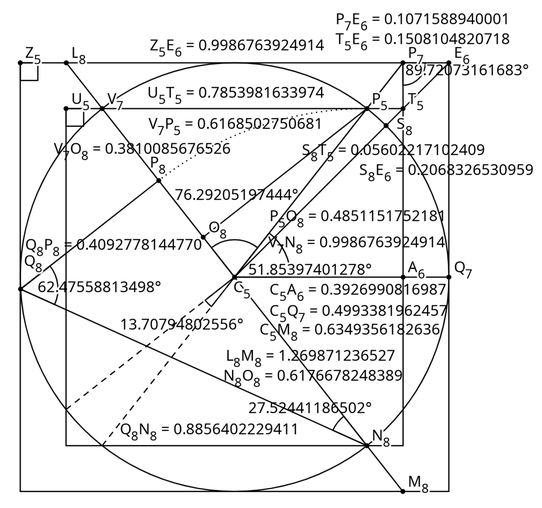

$TSA_{Co} = 5 - \sqrt{5} + \sqrt{\Phi^{-1}}$

$V_{Co} = \frac{1}{3\sqrt{\Phi}}$

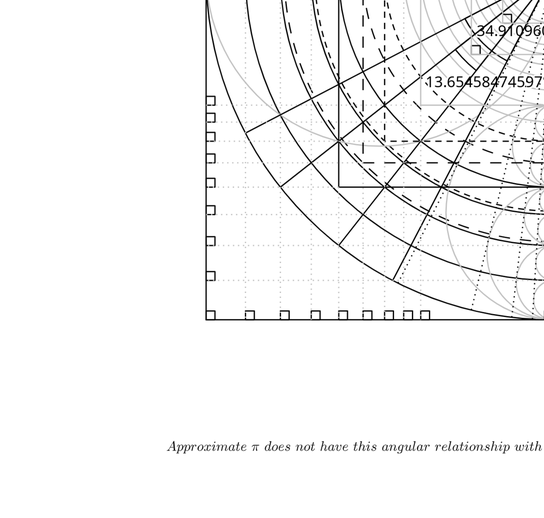

The trilemma that you cannot see above zoomed in many, many times below
Approximate π hides its "shadow" and so hides conflicting values
Greater $\pi \approx 3.152494728376...$, Lesser $\pi \approx 3.14159...$

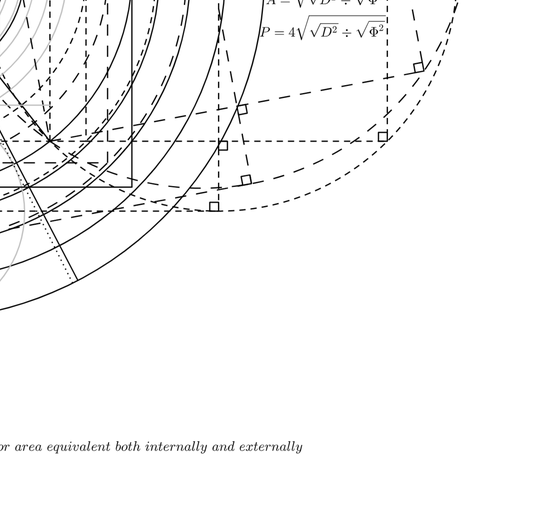

Since the measure of $C : D$ as π/D as $4\sqrt{\Phi^{-1}}$ is only itself hiding no proportion different from itself as a circle or square, it remains to be the true logos of "π"

Here lies four examples using greater and lesser approximate π based square perimeter and angle values, none resolves the trilemma
None of the points on the 1 unit square are perpendicular to the tangent of the approximate perimeter square π value
Neither the greater nor the lesser approximate π's square and angle in relation to the circle has any unique property in relation to the 1 unit square
Only the $4\sqrt{\Phi^{-1}}$ square resolves the trilemma honestly without using any hidden square

True π as constructible incommensurate magnitude of Golden Mean

False π as inconstructible commensurate $n \to \infty$ sided polygon perimeter

Comparison

Centered True $\pi \perp$ Chord Length $=$ Diameter Length

Offcentered Transcendental $\pi \perp$ Chord Length $<, \neq$ Diameter Length

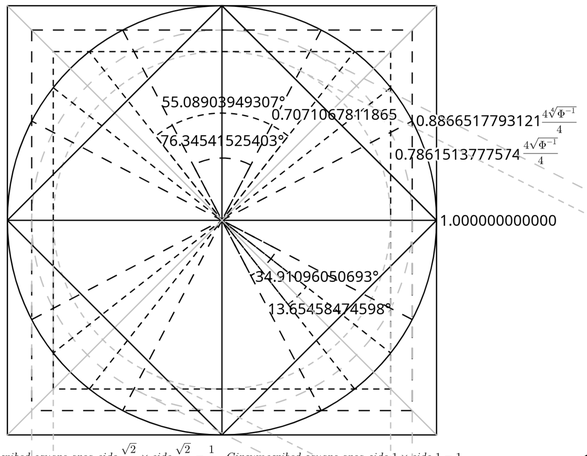

The true π's area square's perimeter and area with the true π's perimeter square's perimeter and area has a unified angular relationship to the Diameter, Circle, and 1 unit square

Geometric proof of perpendicular tangents and consistent constant rate of asymmetric symmetry for true π

Approximate π does not have this angular relationship with its perimeter or area equivalent both internally and externally

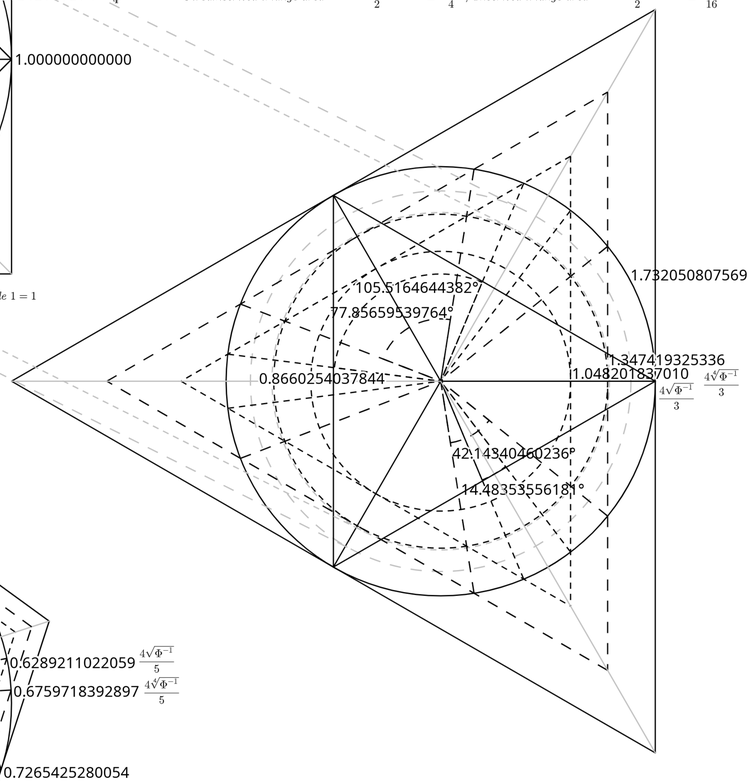

Using the proper angles, new circles and squares can be constructed both inwards and outwards all in perfect constant proportional harmony at any magnitude

Given an equilateral $n \to \infty$ sided polygon with the same area as the circle, it approximately approaches towards the measure of the circumference of a circle with the same area as the polygon
Circumscribed 1 unit square meets 1 unit diameter circle at four intersections, the square and circle has internally 360° unity with each other, there's one circumscribed polygon with 1 unit perpendicular midline with 1 unit side
Inscribed square area : circumscribed square area = inscribed square area, inscribed square side : circumscribed square side = inscribed square side, no inscribed polygon with 1 unit diagonal with 1 unit side
Using the circumference measure of true π, any sided polygon can be made with the same perimeter to the 1 unit diameter circle's area square perimeter or perimeter square perimeter
However, the area takes precedent over the perimeter or circumference of the polygon or circle as the common unity of the constant of two different ratios of magnitude sharing the same area

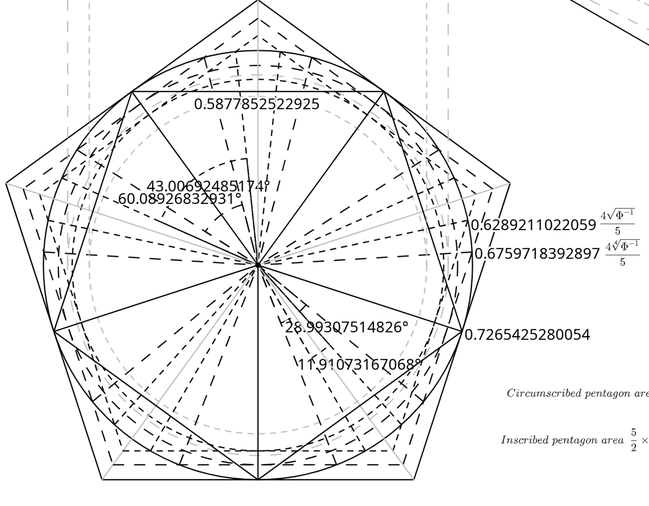

Inscribed square area side $\frac{\sqrt{2}}{2} \times side\ \frac{\sqrt{2}}{2} = \frac{1}{2}$, *Circumscribed square area side* $1 \times side\ 1 = 1$

Circumscribed triangle to 1 unit diameter circle has sides longer than 1, circumscribed pentagon to 1 unit diameter circle has sides shorter than 1
Any inscribed polygon side is shorter than diameter of 1 unit diameter circle, all inscribed polygons have no direct proportion to the 1 unit diameter circle
Only the circle's area square's perimeter side or the circle's perimeter square's perimeter side is also the value of its area

Wise and Intelligent
Wise and Unintelligent

General Life Lessons
Wisdom
Know thine Love within Wisdom of the Divine Self above all else
Seek out noble personalities with noble intellects
Work smarter not harder towards self sufficiency
Discernment
Compared to what? At what cost? What hard evidence do you have?
Learn about truisms, heuristics, fallacies
Situational Awareness
Be aware of your surroundings using discernment
Trust not many, trust in truth alone
Never take any falsehoods and ad hominems from anyone seriously
Never be around those bound to fetters that you don't want to emulate
Redundancy
Have more than one thing of importance in more than one location
One archive is a backed up backup of the original
Four Types of Redundancies : Body, Mind, Social, Monetary
Of the Body : Clean Air/Water/Food/Clothes/Shelter/People/Pets, Hygiene maintenance products, Trauma Kit, Medicine (see : hom3ostasis.com by Dmitry Kats)
Of the Mind : Analog and Digital Data of Memories, Knowledge, Wisdom, e.g., Digital Files in Portable SSD, Physical Copies of Nondualist Philosophy Books, Personal Diary
Of the Social : Family, Relatives, Friends, Communities, Allegiances
Of the Monetary : Tools, Weapons, Ammo, Land, Fuel, Vehicles, Minerals, Crops, Livestock, Networking, Currency, Stocks, Time, Services, Collectables, Miscellaneous Consumables
Diversification
Diversify life skills
Preplan to prepare for all tragedies and eventualities
Diversify Redundancies
Seek Not Excess
Don't promote trash for anyone
Don't perpetuate personality cult
Don't abuse intelligence, charisma, beauty, strength
Don't go along to get along in being all things to all people by pandering to ignoble personalities and/or ignoble intellects

Seek Not Excess
